

Top 10 Reasons We Need One Water

Marble Falls has launched the **One Water Plan**, a comprehensive approach that connects and optimizes all water sources through improved conservation, treatment, and reuse. Here's how it benefits our community:

1. Ensures Long-Term Water Security

With the population expected to double by 2040, One Water will ensure a reliable water supply despite rapid growth and climate challenges.

2. Drought Resilience

By reducing dependence on the drought-prone Highland Lakes system, One Water diversifies our water sources, making us more resilient to changing weather patterns and extended dry periods.

3. New Water Reclamation Facility

A required new reclamation facility will significantly increase wastewater treatment capacity and recycle water for irrigating parks and green spaces.

4. Advanced Water Recycling

Future phases of One Water include piloting and building an advanced water purification plant to treat and recycle water to meet drinking standards.

5. Cost-Effective Infrastructure

Building a new water reclamation facility is the most cost-efficient solution to increase wastewater treatment capacity, ensure reliable service, and pave the way for future water recycling initiatives.

6. Enhanced Water Management

One Water integrates all aspects of water management—new water sources, conservation, treatment, and reuse—into a single, cohesive strategy, maximizing every drop of water available to Marble Falls.

7. Sustainable

One Water helps meet our future needs while protecting the environment, ensuring our community thrives without depleting water resources.

8. Economic Viability and Quality of Life

A stable water supply is essential for Marble Falls's economic health. By securing water for the future, One Water supports and attracts local businesses and continues our excellent quality of life.

9. Innovative Funding Solutions

The One Water plan is funded through a combination of state and federal grants, low-interest loans, and impact fees, making it a cost-effective and financially sustainable approach for residents and businesses.

10. Leadership in Water Sustainability

With the One Water plan, Marble Falls joins several Central Texas communities in adopting advanced water reuse technologies.
